

# Enhancing the News

---

October 2006

## **The environment is a hot topic**

Global warming is a serious and growing concern. Severe storms, floods, coral bleaching and melting ice caps are issues being reported in the media everyday and this evidence of climate change is hard to ignore.

EnhanceTV has a brand new feature article that looks thoroughly at global warming and climate change. It's called [The harsh winds of climate change](#) and is available for free download.

There are many TV products in the EnhanceTV online store that look at global warming and climate change, including:

[Four Corners: What Price Global Warming](#)

[Cutting Edge: Global Warming – Bush's Climate of Fear](#)

[Special: Faraday Lecture 2006 – Emission Impossible, Can Technology Save the Planet?](#)

[Cutting Edge: Five Disasters Waiting to Happen](#)

Other useful resources include the study guide for [An Inconvenient Truth](#), the documentary focusing on politician, turned environmental advocate, Al Gore. The film is currently screening in cinemas and the study guide can be downloaded for free.
