CHANNEL SBS

DURATION 60

Climate Change is hot on the political and social agenda internationally. Our climate is changing, with industrial production, habitat, transport and everyday human activities acknowledged as causes of global warming. The Gulf Stream and the Next Ice Age is a one-hour documentary which explores the results of a recent American government report that believes the collapse of thermohaline circulation will take place around the year 2010 and impose a minor ice age on Europe.
